

Objectives and investment policy

Objectives

The objective of the fund is to generate high absolute return. The share class is accumulating.

Investment policy

The fund mainly invests in long and short positions in bonds and fixed income markets primarily in the Nordic, but also Euroland, UK and US. The fund aims to utilise imbalances in the markets by investing in both traditional government bonds and mortgage bonds as well as financial derivative instruments. The fund aims to protect the investments by hedging the interest rate risk fully or partially, as well as by investing in a number of different strategies. The gross exposure is capped at 150 times the value of net assets. The investment strategy is active. This means that there may be significant differences in the return relative to the alternative investment fund's target. The fund is categorised as article 8 under SFDR and promotes environmental and/or social characteristics, as well as good governance practices, through screening, exclusions, investment analysis and decision-making as well as active ownership. The fund follows Danske Invest's responsible investment policy. Fund shares can normally be redeemed on banking days with one week's notice. Recommendation: This alternative investment fund may not be appropriate for investors who plan to withdraw their money within 3 years.

Latest fund report

In October, Danske Invest Hedge Fixed Income Strategies provided a return of 0.58%. Year to date, the return is 10.94%.

October saw a mixed performance for risky assets, as optimism around stabilising global trade tensions was tempered by renewed geopolitical concerns. In the US, the Federal Reserve cut interest rates by 25 basis points, signalling ongoing caution amid signs of economic cooling. Labour market data showed continued softening, while inflationary pressures remained subdued despite fluctuating oil prices.

In Europe, the ECB kept monetary policy unchanged, reaffirming its commitment to supporting growth in a challenging economic environment. Weak industrial production data in Germany underscored persistent difficulties for the region's largest economy, while fiscal policy debates in France continued to centre on balancing fiscal discipline with economic reforms across the euro area.

The positive performance in October was broad based within our investment areas. Over the first ten months, investment areas including covered bonds, curve trades, cross-currency swaps, and country spreads have contributed significantly to our positive performance. However, some of our protection trades have encountered challenges, resulting in negative returns.

Looking ahead to the remainder of 2025, we continue to see potential for attractive investment opportunities, although fewer appear as compelling as earlier in the year. With returns already exceeding 11% year-to-date - significantly surpassing this year's target of the risk-free rate plus 3-5% annually - the fund has delivered performance well above expectations. While the remainder of the year may present more moderate opportunities, we remain optimistic about generating additional returns before year-end.

Geopolitical uncertainties remain high, particularly the ongoing Ukraine/Russia conflict, which continues to draw significant attention with persistent attacks and ineffective peace negotiations, other global tensions also remain focal points. These include the conflict in Israel/Gaza and the tensions involving China.

At the end of October, the portfolio's risk level, measured in terms of Value-at-Risk, is approximately 38% below our maximum risk limit. This represents a largely unchanged risk level compared to the beginning of the month.

Historical returns are not a reliable indicator of future returns. It should be noted that monthly returns (in percent) are non-additive.
