Objectives and investment policy

Objectives

The objective of this alternative investment fund is to achieve investment growth in any type of market conditions (absolute return). The share class is accumulating.

Investment policy

The fund gains investment exposure to bonds and money market instruments from member states of the EU, member states of the OECD, China or public international bodies. The fund may gain exposure to any sector.
The fund is categorised as article 8 under SFDR and promotes environmental and/or social characteristics, as well as good governance practices, through screening, exclusions, investment analysis and decision-making as well as active ownership. The fund follows Danske Invest's responsible investment policy.
In actively managing the fund's portfolio, the investment manager applies flexible and dynamic investment strategies, taking long and short positions that seeks to take full advantage of market changes and opportunities within fixed income markets.
The fund may use derivatives for hedging and efficient portfolio management, as well as for investment purposes. Expected leverage is 1,500% to 3,500% with an expected maximum of 4,000%.
The main part of the share class' NAV will be hedged against the base currency of the fund. However, the share class remains exposed to the currencies of the investments in the fund.
Recommendation: The fund may not be appropriate for investors who plan to redeem their money within 3 years.

Latest fund report

In September, Danske Invest Hedge Fixed Income Global Value Fund provided a negative return of -4.75%. Year to date, the return is 3.03%. Since inception in June 2018, the portfolio has delivered a return of 114.05%.

September, and particularly the last week of the month, was a very volatile period in global fixed income markets. 30-year yields in both US, UK and France edged higher to levels not seen in decades. Especially France came under pressure with yield spread to Germany widening to levels not seen since the Euro Debt Crisis in 2011 and 2012. While public debt levels have been increasing for years in the previously mentioned countries the higher yield levels is putting further pressure on deficit levels. That being said, the moves in September seem to have been fueled further by stops from hedge funds with positions in France. We expect elevated volatility to continue in the near term. The elevated volatility often implies attractive opportunities across fixed income markets.

Activity in the EUR fixed income market picked up in September as issuers were back after the summer break. Looking ahead, activity is expected to increase further in October if volatility decreases again. Throughout the first months of the year, we have seen that global bond issuers are ready to take advantage of periods of lower volatility to issue debt. The need for additional funding for energy subsidies could pose an upside risk to this year?s sovereign funding outlook.

The remainder of 2026 could be eventful. Market focus is for now on elevated rates volatility and the recent spread widening in France and Italy. In addition, the next announcements from Trump regarding geopolitics, as well as the potential re-emergence of new tariffs on selected countries and products. The renewed uncertainty regarding the interest rate path of both the ECB and the Fed remains elevated. Kevin Warsh has replaced Powell as Fed Chair, which implies even greater uncertainty.

Growth has remained resilient despite higher energy prices, and the labour market remains solid. At the end of September, the risk level (in terms of Value-at-Risk) was 28% below our maximum risk limit, which is higher compared to the end of last month. We expect to keep the fund?s risk utilisation roughly unchanged in the coming months, depending on the opportunities that may arise.

Historical returns are not a reliable indicator of future returns. It should be noted that monthly returns (in per cent) are non-additive.

Awards

Manager

Name:
Anders Møller Lumholtz
Danske Bank Asset Management
Title:
Chief Portfolio Manager
Background:
M.Sc. (Economics)
Years of experience:
17

Basic information

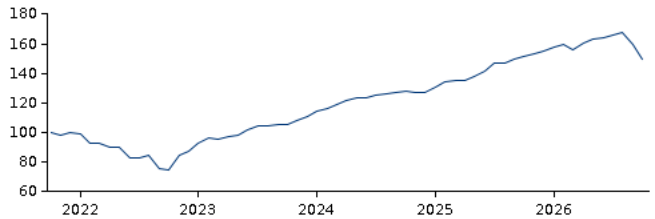
Max. exit charge	0.00%

Performance fee: 20% of the share-class outperformance compared to the reference indicator, which is the High-water mark adjusted by Swedish krona Short Term Rate (SWESTR). The average of the last 5 years performance fee was 1.93%.

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products.

Return in the period: 29.10.2021 - 30.10.2026



The default for the chart is the return for the past 5 years as of end of month or, if the fund is less than 5 years old, since launch. Past performance is not a reliable indicator of future results. Future returns may be negative. The return may increase and decrease as a result of currency fluctuations if the fund is issued in a currency other than the currency used in the country in which you are domiciled.
